

Laravel Project

Description

Kanban board is the most popular agile task management tool. In this project, you need to implement a kanban board for simple task management. Take a look at the wireframe <https://wireframe.cc/GTR3dJ> where you get a very basic layout of the required kanban board. There is a text box where the user will write a task and when the user hits the Add button it will be added as a card on the "To Do" Board. Then the user can change the card status on any one of the boards "In Progress" or "Done".

Here are a simple actions users are allowed to do

1. The user creates a task card and it will be added to "To Do" board
2. The user can change the task card

The project has two parts:

Part One: You need to submit UI related task

Part Two: REST API to preserve the task data

We are expecting the following thing from you

1. You are using Laravel Framework for this project
2. You are following the wireframe
3. Complete documentation to run the projects
4. A screencast where you explain the project functionalities

Notes

1. You can use any database you prefer
2. Do not use any kind of library to implement kanban board UI.

Deadline

5 Days

How to Submit

You need to upload your project on a public repository (such as GitHub) and sent an email to orangetoolztech@gmail.com with the repository link.

If you have any queries regarding project you can email on talha13@gmail.com
